## SALE INFORMATION

**STARTING TIME:** 2.30 pm

**VENUE:**

This Bull Sale will be held at Banquet, 420 Fosters Lane, Mortlake, Victoria.

**INSPECTION:**

We encourage buyers to inspect the bulls prior to sale day. It allows us to assist you select the sire best suited to your needs. Phone us on 0419 884 839 and advise us of your intending visit.

Lots catalogued are available for prior Sale day inspection at our Bull Walk day from 1.00pm on Thursday 18th February.

Sale day inspection from 11.00am.

**CATERING:**

Lunch will be available on Sale Day.

**FREE DELIVERY:**

Banquet offers free delivery to the buyer's nearest town on route to Adelaide, SA and Emerald, QLD and to the property within Vic.

**BULL TESTING:**

All bulls have passed a comprehensive fertility test conducted by Dr. Craig Wood and Dr. Libby Summerell of Terang Mortlake Veterinary Clinic including –

examination for structural soundness  
examination of reproductive organs  
measurement of scrotal circumference  
SEMEN MOTILITY tested  
SEMEN MORPHOLOGY tested

**Semen Motility**

Sperm cells need to be motile. At about 60um long, they've a way to travel to get the job done. Following collection of a semen sample, a drop is placed on a microscope slide and examined, 'crush side', to assess the percentage of sperm cells moving forward.

**Semen Morphology**

Morphology is the anatomy or structure of the sperm. It cannot be tested 'crush side' requiring a large specialised laboratory microscope to examine a preserved semen sample, assessing the % normal and % abnormal sperm cells. It can pick up defects in the sperm that 'crush side' testing cannot. The most serious of these defects can see the sperm start to fertilise an egg but fail to result in a viable embryo and the female will fail to fall in calf.

Note that Semen Morphology can differ in subsequent samples from the same bull. Stress can cause this and putting a bull through a sale will generally cause some stress.

**THE BANQUET BULL GUARANTEE:**

All bulls are backed by a 3 YEAR GUARANTEE. In the event of a bull proven to be incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls' incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim.

It is important to understand that normal care must be taken and good husbandry practices observed, as we cannot replace a bull that is injured or dies for any reason. As such, we recommend you insure animals against injury. A representative of an insurance service organisation will be available on sale day.

## ANIMAL HEALTH INFORMATION

**NATIONAL CATTLE HEALTH STATEMENT:**

Banquet has its own Biosecurity Plan prepared in conjunction with our local vet Dr Craig Wood. We are a J-BAS 8 herd.  
See page 99 for our National Cattle Health Declaration.

**STOCK HEALTH:**

All bulls have been ear notched tested negative for Pestivirus. They have also been vaccinated with Pestiguard vaccine (pestivirus), Vibriovax (vibriosis), 7 in 1 Vaccine (leptospirosis) and drenched with Paremectin. Any bulls purchased for Queensland will be vaccinated against 3 day sickness and receive the 3 germ tick vaccine upon request.

**RECESSIVE GENETIC CONDITIONS (see pages 92 & 93)**

All bulls in this Sale are free of AM, NH, CA and DD by parentage, or have been tested free.

**NO CARRIER BULLS ARE BEING OFFERED FOR SALE**

**REBATE TO OUTSIDE AGENTS:**

Outside agents accompanying a purchaser to the sale are entitled to a 5% rebate. Please refer to page 4 for further detail.

**AFTER SALE SERVICE:**

Banquet is renowned for excellence in providing after sales service. If in doubt, speak with us or with any one of our many satisfied clients.

**FURTHER INFORMATION:**

Contact Stephen or Noeleen Branson by phoning 0419 884 839 or 0437 029 992  
or Email [banquetangus@westvic.com.au](mailto:banquetangus@westvic.com.au)

# OUTSIDE AGENT COMMISSION REBATES

5% rebate will be paid to all agents that attend and who purchase with or on behalf of their clients and settle within seven days of sale date.

2% rebate will be paid to all agents introducing clients that purchase but not accompanied by them to the sale. A written introduction must be received by the vendor 48 hours prior to the sale and accounts must be settled within 7 days of the sale date.

## SIGHT UNSEEN PURCHASING PROGRAM

100% satisfaction guarantee.

Available to buyers who cannot attend the Sale.

For those purchasers who have discussed their requirements with us prior to the Sale we offer a 100% money back guarantee if the purchaser is not completely satisfied with their purchase. We must be notified within seven days of taking delivery. However the purchaser will be responsible for return transport costs.

## WELCOME

“If you can read this with the naked eye you weren’t farming the last time the beef industry was this good”.

I nominate the 1973/1974 period as being when Australia jumped off the sheep’s back and clambered onto the cow. Japan’s economy was booming, and they were in love with beef. It was in this period that the famous South Boorook Hereford Stud was the leader of the “Whiteface” World. At their Annual Bull Sale, the average price bull would have purchased a new Landcruiser! I doubt any sale in 2021 will average over \$100,000.

20/21 is still an amazing time in Agriculture. Sheep, lamb and cattle prices are high. Feed prices are low but the extraordinary yields in many locations have compensated for the reduced price per tonne. Of course, for growing businesses the big kick has been the reduced costs of borrowing, and this is the season that just keeps on giving. Since May 2019 conditions at Mortlake have been close to perfect. Now mid-January 2021 we have green pastures that are still growing! And the forecast for next week is more rain! Roll all these factors together and it is a perfect storm of prosperity. Just ask fencing contractors, machinery and fertiliser salespeople and real-estate agents.

### Long may it Last!

It is exciting to see so many younger people joining agriculture. Their energy and intelligence will propel Australian Agriculture to even greater heights. Their enthusiasm will motivate those that like me are more mature. Not all their innovation will work but we will all learn from it.

Just as the seasons roll on these young farmers will become the leaders and mentors of our industry. As this transition occurs those more experienced, AKA Old Buggers, will ride off into the sunset content that the vocation that we all love so dearly is in the caring stewardship of the next generation.

I try to be positive but there is always those less fortunate and deserving of our compassion. Mother Nature has been more generous during 2020. But some are still gripped by drought or devastation by flood or fire. Our hearts go out to close friends who were severely impacted by the Avenue Range Fires.

I refuse to allow my reflections of 2020 to be dominated by Covid-19. But am sympathetic to those who have lost family or been isolated from their ageing or unwell family or grandchildren.

I have special feelings for those hard working and brave Aussies who sought to contribute more and started a new business in the summer of 2019/20. We hope their new pub, restaurant or motel survives. I do not have the same feelings for the Victorian Public Service who suffer from COVID-19 amnesia.

As always, thank you for your interest in Banquet. Care for others as you reach for your goals in 2021 and we look forward to your companionship in 2022.

**Best Wishes for 2021,  
from the Branson Family.**

# BANQUET FEATURE SIRES

## BANQUET JAMBEROO J507

Witalocka X10  
**Sire: BANQUET DUNCAN D412**  
 Banquet Dream A250

Banquet Abode A005  
**Dam: FORRES WILCOOLA D107**  
 Lochton Y004

Jamberoo J507 has an exceptional phenotype. He has a powerful head, huge capacity and a long, thick and deep hindquarter. All this adds up to weight and lots of it. These Duncan sons and daughters have lots of weight and pass it to their progeny. A half-brother to J507, H511, was also used at Banquet. Their grand sire, Abode A005, topped our Sale at \$20,000 to Forres Stud. At their Dispersal we repurchased him for \$22,000 in conjunction with Quarterway and Shingle Hut. J507 has sired 129 progeny at Banquet. His sons are keenly sought after. The first drop featured in our 2018 Sale and sold to a top of \$19,000 to Frank and Andis Sorraghan. In our 2020 Autumn Sale his son, Privilege P357, was top price at \$27,000 to Toora West. In this Sale we feature the offering of a 50% share in our pick of the J507 sons (Lot 59).

## BEN NEVIS METAMORPHIC M51

TE Mania Bartel B219  
**Sire: AYRVALE BARTEL E7**  
 Eaglehawk Jedda B32

Ben Nevis Eritrea E6  
**Dam: BEN NEVIS JEAN K80**  
 Ben Nevis Jean H215

Metamorphic M51 was purchased for \$32,000 in conjunction with Fernleigh Stud and Merchiston, Atahua and Twin Oaks in N.Z. A "Meta" son topped our record-breaking Spring Sale at \$41,000. Australia wide sons have averaged \$15,000 for Ben Nevis, Bannaby, KO and Banquet Studs. Metamorphics dam, K80 and grand dam H215 were the top two donors at Ben Nevis. At their Female Reduction Sale Jean K80 was sold for \$38,000 and Jean H215 sold for an Australian record of \$82,000 to Bannaby and Banquet.

# BANQUET FEATURE SIRES

## BANQUET NIXON N099

TE Mania Emperor E343  
**Sire: ABERDEEN ESTATE HOMER H70**  
 Aberdeen Estate Dream F21

Millah Murrah Doc F159  
**Dam: BANQUET KITE J463**  
 Banquet Kite G300

I do not know what is the most exciting trait in N099 is. His exceptional calving ease with consistently lower birth weights. Amazing growth in his calves, he has sired the heaviest bull in our Spring drop lot. The extra muscularity of his sons with their thickness and depth of hindquarter and flank. The consistently superior sons that his dam, J463, produce. Mirrool M078 topped our 2018 Autumn Sale at \$35,000 to Robert Love, Nixon N099 topped our 2018 Spring Sale at \$32,000 to Brad Saunders and P099 at \$18,000 to Philip Webb. Now you know the history, inspect his sons. We are sure you will be impressed.

## WATTLETOP MOONSHINE M42

Connealy Earnan 076E (USA)  
**Sire: MUSGRAVE BIG SKY (USA)**  
 SAV Primrose 8244 (USA)

Wattletop Sitz 458N  
**Dam: WATTLETOP DANDLOO K48**  
 Wattletop Dandloo H297

Noleen selected Moonshine M42 from the very last Wattletop Bull Sale. Purchased in partnership with Quarterway Stud, M42 was only a yearling at the time. Moonshine is a unique sire. He has proven to have exceptional calving ease. His calves are consistently light born with a refined shoulder but still vigorous at birth. His sons, although low birth weight, show particularly good growth, significant muscularity and extra cover. His daughters are now in production and we are very excited. They are lang and refined through the neck and shoulder. Strong spined and have deep ribs and flank. Their udder shape and teat size are excellent. Most importantly their calves are sappy. The first sons of M42 sold in Autumn 2020 to top at \$21,000. We have retained two sons and kept semen from another three.

# BANQUET FEATURE SIRES

## BANQUET LUKAS L200

Sire: SYDGEN BLACK PEARL 2006 (USA)

Dam: COOLANA KAURI E39

Lukas L200 was selected by John, Robyn and Peter Blyth, Fernleigh Stud, at our 2017 Sale. L200 topped the Sale at \$52,000. He impressed with his powerful head, deep body, capacity and thickness. As L200 is maturing he is certainly a stunning beast. So much volume, softness, soundness and bomb proof temperament.

TACE	DIR	DTRS	GL	Bwt	200	400	600	Mwt	Milk	SS	DC	Cwt	EMA	Rib	Rump	RBV%	IMF%

## BANQUET LIBERTY L352

Sire: BANQUET FORBIDABULL F485

Dam: BANQUET DREAM G489

Lot 128 Q086, son of L352

Liberty L352 was a feature in our 2017 Sale when a last minute injury forced his withdrawal. After a full recovery L352 has become a much admired herd sire at Banquet. L352 is a large framed bull with excellent head and jaw, long body and exceptional feet and temperament. The sons in this Sale show these traits. He is line bred to the Dream family. His sire, Forbidabull F485 was sold to Onslow for \$26,000. His dam, G489, is a daughter of Hingaia 469 and Vermont Dream Y301, the greatest cow to come from Vermont.

TACE	DIR	DTRS	GL	Bwt	200	400	600	Mwt	Milk	SS	DC	Cwt	EMA	Rib	Rump	RBV%	IMF%

## MERRIDALE GAFFA G4

Sire: SITZ NEW DESIGN 458N

Dam: VERMONT DREAM E096

At the Dispersal of Vermont Angus in 2010 we admired the 10-month-old Dream E096. She sold for \$38,000 to Merridale and Crawford Studs. We followed her progeny closely and selected Gaffa G4 to join our sire team. Gaffa is owned by Dunoon Angus and has been used widely in that herd. Gaffa adds length of body and extension of neck to his progeny while maintaining the traditional depth and thickness of the Banquet beast. We expect his daughters to be exceptional matrons.

# BANQUET FEATURE SIRES

## BANQUET LEIGH L010

Sire: ABERDEEN ESTATE HOMER H70

Dam: BANQUET DREAM B189

Leigh L010 created vigorous competition in our 2017 Sale before being knocked down to Charles and Cass Kimpton for \$30,000. Like so many of our sires at Banquet he is strongly influenced by the Dream family. His sire, Homer, is a son of Aberdeen Estate Dream F21 who was sold for the then record of \$48,000. Dam of L010, Dream B189, was an outstanding daughter of V104. Four sons of V104 were used at Banquet. In our 2020 Spring Sale a son sold to a top of \$32,000 to Cleveland Pastoral, Tasmania.

TACE	DIR	DTRS	GL	Bwt	200	400	600	Mwt	Milk	SS	DC	Cwt	EMA	Rib	Rump	RBV%	IMF%

## BANQUET JHETT J426

Sire: BANQUET FADDIST F238

Dam: BANQUET DREAM G489

J426 is one of the most exciting sires at Banquet. He is moderate framed with excellent muscularity. He is easy doing with exceptional structure. He gives us confidence that he could thrive with high workloads in any conditions. J426 supersedes his sire as our choice of sires descending from Right Time 24J. His dam, Dream G489, may be our most valuable donor at present. She has enormous capacity, and her progeny are exceptional. G489 is a daughter of Hingaia 469 and Vermont Dream Y301. Two other sons have been retained at Banquet. Liberty L352 and Powerhouse P288.

## BANQUET NUNN N089

Sire: BANQUET KODAK K346

Dam: BANQUET DREAM K349

This Sale has the first sons of N089. The length and width of their pelvis is a feature. They also impress us with their length, softness and hair type. The combination of these traits promises to deliver correct and powerful sons and very maternal daughters. We will continue to use N089 heavily. He was purchased by John Matthies at our 2019 Sale for \$19,000.

**Banquet Quiet Y091 – Grand Dam of Lot 14**  
 – Dam of Lots 15, 16 & 17

★ BUYER'S CHOICE ★

Selling the pick of three outstanding flush brothers.  
Here is an opportunity not to be missed.

These calves have stood out since birth and keep powering ahead of their contempory, we have decided to offer the pick to give you the opportunity to step into an elite genetic combination earlier.

Their dam, Quiet Y091 sired by the \$40,000 Dylemma Radar W42, has been a super star, providing extreme docility and longevity. She has had sons sell to \$14,000. Y091 has had 5 daughters and 3 granddaughters promoted to the donor team. A great grandson sold for \$22,000 in last year's Sale selected by Fernleigh Angus. Unfortunately, Y091 died on 27/12/20 and has been laid to rest on our property.

Ben Nevis Metamorphic M51, sire, of these calves is well known to our clients.

A son topped our 2020 Spring Sale at \$41,000. Aust. wide "Meta" sons are averaging \$15,000 for Ben Nevis, Bannaby, KO and Banquet.

Metamorphics dam, K80 and grand dam H215 were the top two donors at Ben Nevis.

At their Female Reduction Sale, Jean K80 was sold for \$38,000 and Jean H215 sold for an Australian Angus cow record of \$82,000 to Bannaby and Banquet.

Wow, another N089 son, refer to notes on Lot 23, Q338 is strong headed, very correct through the front end, fine shouldered and with extra length of hip to pin. When cattle are observed with patience there accuracy of movement and stance becomes obvious, this is correct structure. Bulls with correct structure produce sound and productive cows that are profitable for many years. Not science, just experience.

Q506 follows the pattern of Lots 26 and 27. He shares their length of body, larger frame and later maturity. Ideal bull for producing big, heavy bullocks off grain or grass. Or to change the shape of a dumpy, wastie cow herd. These type of bulls are valuable and rare in the current Angus population. L352, sire of Q506, adds these growth traits with a strong maternal background.

# RECOMMENDED FOR JOINING MAIDEN HEIFERS

The following thirty Lots have been selected on

**Type** – long necks, fine shouldered and moderate bone.

**Pedigree** – They are sired by proven calving ease sires that have been used by Banquet.

**Birth Weight** – All these bulls are in the low to moderate actual birth weight range.

**Age** – At 16 to 18 months of age these bulls are naturally lighter and therefore gentler on heifers.

**EBV** – EBV's of these lots are in the low to moderate range for birth weight EBV.

**Remember** – Management of the heifers has the greatest impact on calving difficulties.

**Lot 48**

The third of this trio of Nixon sons. Same head and jaw. Same thickness, depth and meat content. Very repetitive really, just the way we like the progeny of Banquet bulls to be. Q208 was only 32kgs, born from a two year old. Hard to believe but I enjoyed weighing the Nixons at birth.

Moonshine M42 and Nixon N099 are unique in their ability to sire consistently lower birth weight calves with explosive growth. For example Q228 started at 30kgs but look at him now. Strong head and jaw, strong spine and muscularity. Overlay that with his correct structure and mobility, low birth, power and accuracy. Quite the package.

**★ BANQUET DREAM G489 ★**  
**Dam of Lots 59, 60, 61, 62, 63, 64 and 65**

For a number of years, we have referred to G489 as our most valuable donor. This is based on three attributes, pedigree, progeny and ET response. G489 is sired by one of the most influential sires to come from N.Z., Hingaia 469. His most famous son, the \$150,000 Millah Murrah Kingdom K35, was sold when 469 would have been 29 years old! The greatest strength of 469 lies in his ability to produce superior breeding females with exceptional longevity. Dream G489 is a great example of this.

The dam of G489, Vermont Dream Y301, was certainly the "Dream" cow of the dispersed Vermont Stud and is increasing her status in the Angus breed. At the Dispersal, a 12 month old daughter sold for \$38,000 and another set an Aust. Record price of \$45,000. At the Aberdeen Dispersal a daughter reset the record at \$48,000. Y301 is a daughter of Banquet Dream Q117 and therefore a grand daughter of Banquet Kiwi Dream M41. A flush brother to G489, Gentleman G500, was used at Banquet until injured. Her first calf, J426, a son that was retained and sired 163 progeny at Banquet. An excellent calving ease sire that bred many calving ease bulls. His daughters will contribute to Banquet for many years. Second calf a son, K383, sold 2016 Spring Sale for \$9,000. Third calf a son, L352, has been retained. His first sons sold in 2020 Autumn Sale to \$16,000. Both these sires have sons in this Sale.

In 2019 we presented an exceptional young bull for Sale, National N278. He attracted a bid of \$48,000 from our long time supporters, Toora West. We only produced one son in 2019, Q488, and here he is for your competition. The accuracy of structure of Q488 is what appeals the most to us. He is strong headed, fine shouldered, strong spine and with excellent length in the hip to pin. These are the traits that we use N278 for and many more of our herd will see his joinings in 2021.

The Banquet herd was founded on strong New Zealand bloodlines. We continue to introduce sires from there to maintain the strong structural and grass finishing traits these cattle have. The sire of Q372, Stoker, is one of these. Bred by the Rowe Family and purchased by the Dalziell Family was all the recommendation we needed to use him. Q372 is a smooth bull with a very correct shoulder. He is strong topped and easy doing with softness. The cow line of Q372 is bred from the Dream family but with quite a story. Ask Hamish about it.

Following the outstanding reports from USA about L.D. Capitalist we chose to trial him. The next test will be when his daughters are in production but his first three sons have all made the Sale. They are attractive, well balanced and full of meat. They will have special appeal to producers looking for earlier maturity patterns. In the case of this Lot, he has an outstanding cow line to help him. If you can spare the time ask Hamish.

Twin brother to Lot 87. Imagine the progeny of these bulls working in tandem in a large mob in your back paddock. A great opportunity to reduce the genetic diversity in your calves. How much easier it would be to select sires for joining daughters of twin bulls. Think about it. If I have confused you just ask one of us. The opportunities with line breeding are enormous. "Banquet is the richest source of linebred outcross genetics".

You have all heard of Metamorphic. I nicknamed Q332 "Meta Muscle Man". Meta consistently adds muscle shape and polishes their coats. In the last Lot I described how I believe in line breeding. And now in this Lot an outcross sire. Whenever we introduce something new to Banquet we strive for a superior cow family. This is exactly where Meta has come from. His dam, Ben Nevis K80 was second top price at the Ben Nevis Cow Sale. We partnered with Bannaby Stud to purchase Meta's grand dam, Jean H215, for the Aust. record cow price of \$82,000.

In the notes on Lot 90 I spoke of the importance of introducing top maternal lines to Banquet. Well thats how we bred Q442. We went to the Anvil Dispersal focussed on securing our pick of the daughters of Lowan Y147. We had used her son Fusion F275 with great success. Unfortunately we were not the only ones who recognised her quality, Bannaby and Banquet had to invest \$52,000 before we bought her home. The great Jamberoo J507 was an easy choice for her first joining. Q442 is your chance to join us on the H126 journey. Flush brother to Lot 45 and half brother to Lots 58 and 115.

Q502 is a long, fine fronted young bull. He is deep flanked and fine skinned. His sire, M158, is like a seal. Long, black and shiny. We identified the Bara family at Kennys Creek as one that consistently performed. We selected U44 as the most powerful of that family and purchased embryos. Sadly M158 was the only calf produced but we have retained him and his influence will filter through the herd.

We are excited with the level of muscularity in this offering. The weaners, steers or bullocks they sire will show that shape. We continue to strive to have these calves shed their winter coats earlier. If we sacrificed the softness in their hair and skin we could accelerate that process. But we must never introduce coarse or harsh coats. Do ability, finish and meat quality would suffer. There is a lot more to eating quality than just how much fat is scattered through the muscle.

## RECOMMENDED FOR JOINING MAIDEN HEIFERS

The following seventeen Lots have been selected on

**Type** – long necks, fine shouldered and moderate bone.

**Pedigree** – They are sired by proven calving ease sires that have been used by Banquet.

**Birth Weight** – All these bulls are in the low to moderate actual birth weight range.

**Age** – At 16 to 18 months of age these bulls are naturally lighter and therefore gentler on heifers.

**EBV** – EBV's of these lots are in the low to moderate range for birth weight EBV.

**Remember** – Management of the heifers has the greatest impact on calving difficulties.

Q433 is another N063 son with all that strength and muscularity and calving ease. Looking at the pedigrees in this catalogue they tell a story. The story of a herd that tests and uses or test and discards and just keeps on striding up the genetic hill. Just keeps combining the best sons and daughters from the best cows and weaves a genetic package that performs honestly and consistently.

This seems strange but we used Q123 over stud cows and he is Lot 121. Well it was easier to reintroduce him into this smaller group. Frankly we did not expect him to not only recover but flourish. We selected Q123 for his balance, structural correctness and doing ability. His depth of body, thickness and great hindquarter also appealed. Of course to get from being admired to being used means he must have a strong pedigree. His dam was exceptional. She produced sons selling to \$20,000 and \$16,000. We retained semen from both. M004, sire of Q123, is from the special donor Kite E442. She is now at Bannaby Angus. Semen retained.

Do you want to increase the yield in your slaughter cattle? If that is a yes then take a look at Q169. He has a big, wide loin and a massive muscle pattern in his hindquarter. Meta-muscle-morphic at work again. The dam of Q169 is a high producing young cow. Q169 is her second son, her first son sold for \$10,000.

We started this Sale with a low birth weight son of J426 at Lot 1. Here is another. But like Lot 1 there is so much more bull than just low birthweight. He has dimension. Try this equation with your calves - add frame and length and volume, then multiply by muscularity. This equals weight. Multiply weight by cents per kilo and that equals dollars in your pocket.

We always try to finish our Sales with a good one. Q086 continues that tradition. Q086 is just full of meat. He has a wide loin and thick hindquarter. In fact I think he is the most muscular son of L352 we have bred. The length of L352 will add that extra dimension to the progeny of Q086. A half brother to Q086, P113 sold last year for \$14,000 to Barrie Griffiths.

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF.  
LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY  
AND SUCCESS WITHIN YOUR BREEDING HERD.

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

# BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## ADAPTATION

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

## RECESSIVE GENETIC CONDITIONS

This is information for bull buyers about the recessive genetic conditions, Arthrogyrosis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

### Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

### What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

### How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

### What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50%) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

### How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

### Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

## DISCLAIMER AND PRIVACY INFORMATION

### Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

### Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

# : DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

### Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

### BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

Insurance Brokers

## FARM INSURANCE

Protect your farm business and your assets with an insurance policy tailored to meet your needs.

Breakwater Insurance can arrange competitive premiums and cover for commercial dairy, beef, sheep and cropping enterprises.

We offer professional, on-farm advice relating to:

- Livestock mortality
- Farm buildings and contents
- Home and contents
- Farm machinery and machinery breakdowns
- Livestock, hay, fencing and farm trees
- Liability
- Motor vehicles (all types)
- Theft
- Business interruption.

### Biosecurity and health information

- Has the owner stated above owned all the cattle in this consignment since birth? Y  N
- Does the property of origin have a completed on-farm biosecurity plan? Y  N
- Have these cattle been tested for the presence of pestivirus antigen? If tested, were any cattle found to be persistently infected? Y  N   
Y  N
- Have these cattle been tested for the presence of pestivirus antibody? If tested what percentage of the tested cattle were antibody positive? Y  N

- Has the property of origin had an occurrence of clinical Johne's disease (JD) in any species in the past five years? Y  N  Unsure

J-BAS of  Eight  (Optional)

- On the property of origin, have cattle been co-grazed with dairy cattle? See explanatory note for advice on co-grazing with non-bovine species Y  N  Unsure

- Has the source herd had a JD test? Y  N  Pending   
If so, which test? Check Test  Sample Test  Date 26 / 6 / 18  
Was the result negative? Y  N

- If dairy cattle, the consignment has a Dairy Assurance Score of: Part A (herd base score) Part B (calf credits) Part C (total Dairy Score)

- Any other relevant health information

### Treatments

Treatment type	Product	Date of treatment within last 6 months
Drench or pour-on	Paremectin	October 2020
Liver fluke		
Other treatments	AD&E, multimin & 7in1	October 2020

### Current vaccinations for the cattle being moved (see explanatory note)

Clostridial (e.g. 5 in 1): Y  Botulism: Y

Leptospira (e.g. 7 in 1): Y  Bovine ephemeral fever: Y

Pestivirus: Y  Tick fever: Y

JD (Sliirum): Y  Vibrio: Y

Other vaccinations (specify):
