SALE INFORMATION

STARTING TIME: 11.00 am

VENUE: This Bull Sale will be held at Banquet, 184 Steeles Lane, Mortlake, Victoria.

INSPECTION:

We encourage buyers to inspect the bulls prior to Sale Day.

Presale Inspection Afternoon

Tuesday 1st September 1:00pm to 4:00pm

At 184 Steeles Lane, Mortlake.

Sale day inspection from 9.00am, Tuesday 8th September.

CATERING: Light lunch will be available.

FREE DELIVERY:

Banquet offers free delivery to the buyer's nearest town on route to Adelaide, SA and Emerald, QLD and to the property within Vic.

BULL TESTING:

All bulls have passed a comprehensive fertility test conducted by Dr. Craig Wood and Dr. Libby Summerell of Terang Mortlake Veterinary Clinic including – examination for structural soundness, examination of reproductive organs, measurement of scrotal circumference. They were also checked for semen motility and morphology.

Semen Motility

Sperm cells need to be motile. At about 60um long, they've a way to travel to get the job done. Following collection of a semen sample, a drop is placed on a microscope slide and examined, 'crush side', to assess the percentage of sperm cells moving forward.

Semen Morphology

Morphology is the anatomy or structure of the sperm. It cannot be tested 'crush side' requiring a large specialised laboratory microscope to examine a preserved semen sample, assessing the % normal and % abnormal sperm cells. It can pick up defects in the sperm that 'crush side' testing cannot. The most serious of these defects can see the sperm start to fertilise an egg but fail to result in a viable embryo and the female will fail to fall in calf. Note that Semen Morphology can differ in subsequent samples from the same bull. Stress can cause this and putting a bull through a sale will generally cause some stress.

SEMEN RETAINED:

Banquet will retain semen from some of the bulls in this Sale for within herd use or progeny testing. These bulls will be nominated on the supplementary sheet.

THE BANQUET BULL GUARANTEE:

All bulls are backed by a 3 YEAR GUARANTEE. In the event of a bull proven to be incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls' incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim.

It is important to understand that normal care must be taken, and good husbandry practices observed, as we cannot replace a bull that is injured or dies for any reason. As such, we recommend you insure animals against injury. A representative of an insurance service organisation will be available on Sale Day.

SALE INFORMATION

NATIONAL CATTLE HEALTH STATEMENT:

Banquet has its own Biosecurity Plan prepared in conjunction with our local vet Dr Craig Wood. We are a J-BAS 6 herd.

See page 45 for our National Cattle Health Declaration.

STOCK HEALTH:

All bulls have been ear notched tested negative for Pestivirus. They have also been vaccinated with Pestiguard vaccine (pestivirus), Vibriovax (vibriosis), 7 in 1 Vaccine (leptospirosis) and drenched with Dectomax. Any bulls purchased for Queensland will be vaccinated against 3 day sickness and receive the 3 germ tick vaccine upon request.

RECESSIVE GENETIC CONDITIONS

All animals in this Sale are free of AM, NH, CA and DD by parentage, or have been tested free.

NO CARRIER ANIMALS ARE BEING OFFERED FOR SALE

REBATE TO OUTSIDE AGENTS:

Outside agents accompanying a purchaser to the Sale are entitled to a 5% rebate. Please refer to page 4 for further detail.

AFTER SALE SERVICE:

Banquet is renowned for excellence in providing after Sales service. If in doubt, speak with us or with any one of our many satisfied clients.

FURTHER INFORMATION:

Contact Stephen Branson - 0419 884 839
Noeleen Branson - 0437 029 992
Hamish Branson - 0427 164 031
Email: banquetangus@westvic.com.au

OUTSIDE AGENT COMMISSION REBATES

5% rebate will be paid to all agents that attend and who purchase with or on behalf of their clients and settle within seven days of sale date.

2% rebate will be paid to all agents introducing clients that purchase but not accompanied by them to the sale. A written introduction must be received by the vendor 48 hours prior to the sale and accounts must be settled within 7 days of the sale date.

SIGHT UNSEEN PURCHASING PROGRAM

100% satisfaction guarantee.

Available to buyers who cannot attend the Sale.

For those purchasers who have discussed their requirements with us prior to the Sale we offer a 100% money back guarantee if the purchaser is not completely satisfied with their purchase. We must be notified within seven days of taking delivery. However the purchaser will be responsible for return transport costs.

Banquet Yendi K224

Black Aqua Lucifer L15

DAM: ANVIL EMBLYNETTE P177

Anvil Emblynette E199

Statesman S154, was retained for his powerful head, strong spine, wide top, big loin, tight sheath and huge hindquarter. He has stamped all of his progeny with all these great traits. His first sons featured in our Autumn 2025 Sale. A son, Valtra V293, sold for \$42,000 in our Autumn 2026 Sale. S154 is breeding very consistent just like his sire, Nuttella N462. We rate N462 as the best sire we have ever used. Now his main sons S005, S154, S439 and U008 are close to his status. Dam of S154, Emblynette P177, was purchased as a calf at foot from the Anvil Dispersal. P177's sons have sold to \$40,000 twice. 5 sons will be offered in this Sale.

Ratanui Ranger 340

DAM: ALPINE ZULU LADY 115

Alpine Zulu Lady 653

Kayjay Meatpack was inspected in New Zealand in 2024 and admired for his depth, thickness, muscularity, mobility and doing ability. He is also backed by a great sire in Merchiston Steakhouse, who has bred many great daughters in New Zealand. Recently a Meatpack son topped the Merchiston Angus (N.Z) bull sale at \$80,000 NZD. Meatpack has passed his thickness and softness onto his progeny. We are excited to see how the Meatpack progeny keep developing. 4 sons will be offered in this Sale.

A powerful bull to start this Spring offering. Warne is the start of a great run of Tom Cruise T220 sons. Tom Cruise attracted a lot of attention for his muscularity, thickness, width, power, docility, pedigree and EBV combination. He went on to sell for a Victorian record price of \$230,000 in our Autumn 2024 Bull Sale. His Dam, Quiet R329, is an elite donor female at Banquet. She has superb docility, structure and doing ability. T220's first and only son offered in our Autumn 2026 Sale sold for \$32,000. W005 has blended the length, thickness and muscularity from his sire and got his extra frame and growth from his dam, Julie N291. N291's sons have sold to \$26,000 and are averaging \$19,000. Her flush brother, National N278, topped our Autumn 2019 Sale at \$48,000 to Toora West. Flush brother to Lots 2 and 3.

SUITABLE FOR JOINING MAIDEN HEIFERS

Lot 18 to Lot 34 have been selected on:

Type – long necks, fine shouldered and moderate bone.

Pedigree – They are sired by proven calving ease sires that have been used by Banquet.

Birth Weight – All these bulls are in the low to moderate actual birth weight range.

EBV – EBV's of these lots are in the low to moderate range for birth weight EBV.

Remember – Management of the heifers has the greatest impact on calving difficulties.

A worthwhile package in Worthy W051. His sire, Tom Cruise attracted a lot of attention for his muscularity, thickness, docility, pedigree and EBV combination. He went on to sell for a Victorian record price of \$230,000 in our Autumn 2024 Bull Sale. T220's dam, Quiet R329, is an elite donor female at Banquet. Worthy W051, is stamped with Tom Cruise's smooth shoulder, strong spine, width, thickness and a sirey outlook. Dam of W051, Quiet U007, has given him extra neck extension, length of body, frame, softness and bone. Flush brother of U007, Uplifted U008, topped our Autumn 2025 Sale at \$64,000 to Camp Creek. Granddam of W051, Quiet H492, has been a fantastic donor. Producing five stud sires and four donor females. Worthy is a very exciting young bull blending three great combinations at Banquet, Tom Cruise, Nuttella and two crosses of the Quiet family. **Should be suitable for joining maiden heifers. Semen Retained.**

W028 is another great example of what Tom Cruise is producing. W028, is wide topped, thick and very muscular. The Tom Cruise / Dream G13 cross has blended very well. Tom Cruise has added the extra power, weight, depth and docility to his progeny while maintaining style and correctness. Also to add his daughters are thick, classy and maternal. Dream G13 is still active, fit and sound at Banquet. Her only Banquet daughter to be offered, Dream V005, sold for \$134,000 to Ballawinna Angus, WA. G13’s sons have sold to \$45,000. Flush brother to Lots 5, 14, 21 and 23. **Should be suitable for joining maiden heifers. Semen Retained.**

Wheeler W040, is another typical Tom Cruise son. He is smooth fronted, strong spined, sleek skinned, long bodied and stylish. A ‘heifer bull’ that should breed some lovely daughters. Dam of W040, Yendi N453, joined our donor team this autumn for her soundness and progeny performance. Her first calf, Quiver Q211, was retained for stud use and sons have sold to \$24,000 three times and grandsons have sold to \$42,000. N453 is also a full blood sibling to super sire Nuttella N462. Should be suitable for joining maiden heifers.

ROSSANDER WILCOOLA X514[#]

W041 has extra thickness, depth and bone. His sire, Sahara S228, sold for \$34,000 in our Autumn 2023 Bull Sale. S228's sons have sold to \$32,000 for Verdict V004 to Springhills Angus, WA in our Spring 2024 Bull Sale. Dam of W041, Wilcoola B14, was selected as our favourite from the Rossander Dispersal Sale for her correctness and longevity. She lived to 19 years of age. Unfortunately we only got two daughters and this one son from her. However, her two daughters have both joined our donor team and have got some very exciting calves on the ground.

WITHERSWOOD KERRY D69[#]

A complete outcross pedigree in Woodruff W018. The only calf from embryos purchased from John and Joan Woodruff of Witherswood Angus. His sire, Equator H11, has over 500 progeny registered. H11 combines Ardrossan A241, Vermont Dream Y301 and the successful Merrigrange Wilcoola family. Dam of W018, Kerry F8, traces back to the great old Queied Q74 who started the Kerry family for Witherswood. W018 is strong spined, thick, soft and easy doing. Woodruff W018, is aptly named in memory of Joan Woodruff.

Buying a bull is an investment. This investment should contribute to the genetics and sale income of your herd for many years. If you are to get the most from your new bull, it pays to look after him well, especially in the first season of use. This report discusses management strategies to maximise the productive life of your bulls.

Arrival:

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when purchased. Bulls can become upset and excited in the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of cows or steers. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water, then leave the bull alone until the next day, before giving routine health treatments.

Mating New Bulls:

Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have fewer problems later.

The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as “expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining”. This expectation would apply to 2 year old bulls, but not to younger bulls.

During Mating:

Check bulls at least twice each week. Watch them work if possible and pay particular attention to any sign of abnormal serving problems like “corkscrew penis” or too many cows returning to heat.

Have a spare bull or bulls available to replace any that break down. If you have to replace a bull, get the bull checked by your vet. Sometimes prompt treatment for small problems can avoid culling. Vendors that provide guarantees on their bulls will usually require a veterinary certificate indicating the problem with unsatisfactory bulls.

Rotate bulls in single sire groups to make sure that any bull infertility is covered. Single sire joining works well but it has risks. The bulls must be checked regularly and carefully or the bulls rotated every one or two cycles.

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

Recessive Genetic Conditions

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which

can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	_% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia (02) 6773 4600.

NATIONAL CATTLE HEALTH DECLARATION

V: 02/05/18

Property Identification Code (PIC) of this property This MUST be the PIC of the property that the stock is being moved from

Attached to accompanying NVD/Waybill No.

Biosecurity and health information

- 1. Has the owner stated above owned all the cattle in this consignment since birth?
- 2. Does the property of origin have a completed on-farm biosecurity plan?
- 3a. Have these cattle been tested for the presence of pestivirus antigen? If tested, were any cattle found to be persistently infected?
- 3b. Have these cattle been tested for the presence of pestivirus antibody? If tested what percentage of the tested cattle were antibody positive?
- 4. Has the property of origin had an occurrence of clinical Johne's disease (JD) in any species in the past five years?

5. On the property of origin, have cattle been co-grazed with dairy cattle? See explanatory note for advice on co-grazing with non-bovine species

6. Has the source herd had a JD test? If so, which test? Was the result negative?

7. If dairy cattle, the consignment has a Dairy Assurance Score of:

8. Any other relevant health information

Treatments	Product	Date of treatment within last 6 months
Drench or pour-on	Dectomax	July 2026
Liver fluke		
Other treatments	7 in 1, AD&E, Multi Min Evolution	July 2026
	Vibriovax, Pestiguard	August 2026

Current vaccinations for the cattle being moved (see explanatory note)

- Clostridial (e.g. 5 in 1):
- Leptospirosis (e.g. 7 in 1):
- Pestivirus:
- JD (Siliurum):
- Other vaccinations (specify):

Declaration

I, Noeleen Elizabeth Branson, declare that I am the owner or the person responsible for the husbandry of the cattle and that all the information in this document is true and correct. I also declare that I have read and understood all the questions that I have answered, that I have read and understood the explanatory notes, and that I have inspected the animals and deem them to be healthy, free of signs of disease and fit to travel.

Signature

* Only the person whose name appears above may sign this declaration, or make amendments which must be initiated
