SALE INFORMATION

CHANGE OF VENUE:

Our Spring Bull Sale will be held in the Saleyards, Mortlake, Victoria.

INSPECTION:

We encourage buyers to inspect the bulls prior to sale day. It allows us to assist you select the sire best suited to your needs. Phone us on 0419 884 839 and advise us of your intending visit.

Lots catalogued are available for inspection from 11.00am, Tuesday 8th September.

FREE DELIVERY:

Banquet offers free delivery to the buyer's nearest town on route to Adelaide, SA and Emerald, QLD and to the property within Vic.

STOCK HEALTH:

Banquet is MN2 accredited under the Bovine Johnes Disease Market Assurance Program. Certificate Number VC128. All bulls have been Vet checked by Dr Craig Wood, Terang. They have all undergone a physical examination of external genitalia and conformation. At the time of the examination involving a crush side semen assessment was performed. The crush side test involves visualisation of the penis and collection of semen. This semen is then analysed for density, mass motility and forward motility. All bulls in this catalogue were considered sound at the time of the examination. They have been vaccinated with pestiguard, vibriovac and 7 in 1. Any bulls purchased for QLD will be vaccinated against 3 day sickness and receive the 3 germ tick fever vaccination.

REBATE TO OUTSIDE AGENTS:

Outside agents accompanying a purchaser to the sale are entitled to a 5% rebate. Please refer to page 5 for further detail.

AFTER SALE SERVICE:

Banquet is renowned for excellence in providing after sales service. If in doubt, speak with us or with any one of our many satisfied clients.

THE BANQUET BULL GUARANTEE:

All bulls are backed by a 3 YEAR GUARANTEE. In the event of a bull proven to be infertile or incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls' incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim.

It is important to understand that normal care must be taken and good husbandry practices observed, as we cannot replace a bull that is injured or dies for any reason. As such, we recommend you insure animals against injury. A representative of an insurance service organisation will be available on sale day.

RECESSIVE GENETIC CONDITIONS (see pages 26 and 27)

All bulls in this Sale are free of AM, NH, CA and DD by parentage, or have been tested free.

NO CARRIER BULLS ARE BEING OFFERED FOR SALE

FOREWARD

I began the foreward for our Autumn Sale with “what a difference a few weeks can make. Since New Year’s Day we have seen widespread rain and unprecedented price movements for all classes of cattle”. Well the ‘unprecedented price movements’ have been surpassed now. We have witnessed cow prices rising by 20c/kg each week to reach 300c/kg.

Today I attended the Bill Wyndham & Co, Spring Store Sale, in Bairnsdale. I am still basking in the euphoria. Grown Angus steers, 460kg, sold for \$1530. The Hurley family’s 9-11 month old weaned calves were the highlight. They had frame, length and bone and were in healthy store condition. The first pen at 345kg sold for \$1235. Lower weights topped at 401c/kg! Their sisters ranged from 299.6c to 321c/kg!
Congratulations to David, Kevin, Rose, Diana and their families.

Our conversations with some of the major buyers were very enlightening. They are finding the prices of 350-400c/kg for young steers difficult. They believe prices in the 300-350c/kg to be sustainable. I have no sympathy for the processors that brutalised our industry for the last two years. But if they are comfortable at long term pricing of 300-350c/kg – I am excited!

Producers counting their calves onto trucks at \$1000+/head, what will that mean to your profit margin? Fencing contractors and fertiliser salesman will be busy again!

Enjoy these good times but spare a thought for those good people who have been forced from our Industry.

A little about this Sale

Over the past few years we have supported multi-vendor Sales in Northern Territory and Queensland. This has been a tremendous learning process and very enjoyable to meet so many Northern cattle breeders. However we believe the best way to service these clients is from Mortlake. This, our first Spring Sale, will be interfaced with Auctions Plus to make bidding for interstate clients easier. Also we have introduced our sight unseen purchasing program (refer to page 5). This program formalises a process we have always followed with Auction and Private Sales. We hope this allows more producers to enjoy our service. As always any special vaccination requirements will be performed and the bulls delivered.

Noeleen, Gordon, Dianna, Hamish and I wish you all a safe and kind end to 2015. We thank you for your support and look forward to working with you in the future.

PS.

I set a goal to sell a cull cow for \$2000. I saved a big cow, tried to pick the right week. Sold her this week, 925kg at 273c, total price of \$2525.25. Over shot the mark again!

OUTSIDE AGENT COMMISSION REBATES

5% rebate will be paid to all agents that attend and who purchase with or on behalf of their clients and settle within seven days of sale date.

2% rebate will be paid to all agents introducing clients that purchase but not accompanied by them to the sale. A written introduction must be received by the vendor 48 hours prior to the sale and accounts must be settled within 7 days of the sale date.

SIGHT UNSEEN PURCHASERS PROGRAM

Available to buyers who cannot attend the Sale with 100% satisfaction guarantee.

Those purchasers who have discussed their requirements with us we offer a 100% money back guarantee if the purchaser is not completely satisfied with their purchase within seven days of taking delivery. However the purchaser will be responsible for return transfer costs.

YOU NEED BIG BOLD BANQUET BULLS

Banquet is a family owned and operated Seedstock Business.

The Branson Family of Noeleen, Stephen, Gordon, Dianna and Hamish operate a predominately Angus cattle operation. Banquet markets 200 bulls annually through auction sales at Mortlake Victoria, and private selections.

Gordon also has his own Banquet White Suffolk Stud which he founded when he was nine years old. He now runs 250 stud ewes and is developing a farm contracting business.

Dianna has taken over the fledgling Banquet Brangus operation. Initially these cattle were bred as part of our research into crossbreeding for our Queensland clients. Dianna is now developing some elite genetic combinations.

Hamish began breeding Suffolk sheep in 2011. Banquet Blacks is now growing rapidly and achieving some major successes.

Banquet is located at Mortlake in South Western Victoria and farms 1000ha of owned and leased property.

Why Banquet?

Banquet's focus is quite simply on making dollars for clients, through the greater efficiencies and productivity achieved from using Banquet genetics.

Banquet cattle are different from the majority of Angus. They are bigger, more powerful, faster growing, have extra muscling and quiet temperament. Ensuring they give premiums for users, whether in crossbreeding or pure breeding programs.

Simply put, cattle that grow quickly and have the capacity to keep growing through to heavier weights, yet have muscling and some finish at domestic market weights, provide greater market flexibility. Being able to target the market with the best price at any given time ensures greater profitability. Feedlotters and restockers alike are targeting Banquet bloodline calves.

All bulls come with Banquet's after sales support and service guarantees. This makes a decision to invest in Banquet genetics both profitable and wise.

BANQUET FEATURE SIRES

GARRISON 8128 DYNAMITE (USA)

Emulation N Bar 5522
Sire: FINKS 5522-6148 (USA)
 Finks Proud Formera 614

Traveler 124 G D A R
Dam: MISS WIX 204 OF Mc CUMBER (USA)
 Miss Wix 365 of McCumber

Through our connections in New Zealand we were able to import Garrison Dynamite semen in 2001. We produced calves in 2002 and 2003. The females from these "X" and "Y" drops proved to be sound, fertile and productive. They included Y032 who is the dam of Ballis B017. B017 is our first sire whose progeny sales exceed \$1million. We sourced the last of the semen in Aust. and are using it sparingly in E.T. The sons in this catalogue are long, soft skinned and maternal. Their sisters are highly valued at Banquet.

 S A Queen Susan 102 (USA)

C A Future Direction 5321
Dam: BOOROOMOOKA VOLITION X199
 Booroomooka Volition V125

Noeleen and I inspected Astron and his progeny at Witherswood Angus. Their consistency appealed to us. They were sound structured with muscularity and a little extra cover. We selected him to use believing he will add these traits to our cow herd. Too soon to know yet how that has worked but his sons are impressive. We have chosen to offer 10 yearlings in this catalogue. They will have exceptional calving ease attributes. Our thanks to John and Joan Woodruff at Witherswood for allowing us to use their sire.

BANQUET FEATURE SIREs

BANQUET EVERARD E019

Banquet Time Frame Y135
Sire: BANQUET BALLIS B017
 Banquet Mavis Y032

Banquet Zema Z032
Dam: BANQUET DREAM B509
 Banquet Dream Y259

This Sale sees the first drop of E019 sons. They are deep and thick with huge capacity. They are strong headed with powerful jaws and show extra softness. These are cattle that will finish on grass. The pedigree of E019 matches his phenotype. He is sired by the exceptional Ballis B107. His dam is a Z032 maiden who is from Y259 who is a flush sister to the almighty Dream W173. W173 is the dam of Forbidabull F485.

BANQUET DAY DREAM D053

Banquet Buzz V011
Sire: BANQUET XTRA BELIEF X030
 Banquet Yendi U82

B/R New Design 036 (USA)
Dam: BANQUET DREAM V104
 Banquet Dream Q34

D053 was retained and used as a yearling. Now at seven years he is still in use. He is our best son of X030. The progeny of X030 were highly sought after for their frame, muscularity and clean skins. Dream V104, dam of D053, was one of our most successful. We have used semen from three other sons. In total 17 sons have sold to \$26,000 and his grand sons have sold to \$40,000. Day Dream daughters are sound, fertile and have exceptional udders and teats.

BANQUET KIWI DREAM (AI)

To those breeders who use the term "grunt" to describe their sires, this one is for you. J355 is strong headed, thick and heavy boned. Wrap this up in a clean skin and J355 should be high on every ones list. His sire is the last son from the breed legend, Banquet Kiwi Dream M41. In fact J355 carries 3 crosses of this incredible matron. The dam of J355 is a half sister to another Banquet sire, Zealful Z021. J355 is indeed a power sire for any month of the Year!

 BANQUET DREAM A203 (AI)

Like the previous Lot, this bull has already been at work. In fact at the time of writing he is still with heifers. J456 is an exceptional individual. He has the structure of a calving ease sire but with tremendous performance in his pedigree. F710 was the Ballis B017 son we selected to retain. He is heavy boned, thick and muscular. The maternal Grand sire, Duncan D412, is one of our favourites. His sons have sold to \$20,000 and we have used four sons.

RECESSIVE GENETIC CONDITIONS

INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

Key point: With today's DNA tools undesirable genetic conditions can be managed!

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

Key point: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

Key point: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Animal Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Key point: The genetic status of an animal is subject to change and will be re- analysed and adjusted each week as DNA test results of relatives are received.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available.

Key point: The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background.

The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia’s Breed Development and Innovation Manager at (02) 6773 4602.

IMPORTANT NOTICES FOR PURCHASERS

~ SALE CATALOGUE DISCLAIMER ~

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

~ DNA PATERNITY VERIFICATION ~

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

~ PRIVACY INFORMATION ~

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

*I, the buyer of animals with the following registration numbers
..... from
member (name) do not consent to Angus Australia
using my name, address and phone number for the purposes of effecting a change of registration of
the following animal(s) that I have purchased, maintaining its databases and disclosing that
information to its members on its website.*

Date:

*Please forward this completed consent form to Angus Australia, Glen Innes Road, Locked Bag 11,
Armidale NSW 2350. If you have any queries, please telephone 02 6772 3011 or
e-mail office@angusaustralia.com.au.*

Bringing a New Bull Home

Buying a bull is an investment. This investment should contribute to the genetics and sale income of your herd for many years. If you are to get the most from your new bull, it pays to look after him well, especially in the first season of use. This report discusses management strategies to maximise the productive life of your bulls.

Arrival

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when purchased. Bulls can become upset and excited in the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of house cows, steers or herd cows. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water, then leave the bull alone until the next day, before giving routine health treatments.

Mating new bulls

Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them

together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as “expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining”. This expectation would apply to 2 year old bulls, but not to younger bulls.

During mating

Check bulls at least twice each week. Watch them work if possible and pay particular attention to any sign of abnormal serving problems like “corkscrew penis” or too many cows returning to heat.

Have a spare bull or bulls available to replace any that break down. If you have to replace a bull, get the bull checked by your vet. Sometimes prompt treatment for small problems can avoid culling.

Vendors that provide guarantees on their bulls will usually require a veterinary certificate indicating the problem with unsatisfactory bulls.

Rotate bulls in single sire groups to make sure that any bull infertility is covered. Single sire joining works well but it has risks. The bulls must be checked regularly and carefully or the bulls rotated every one or two cycles.

Your partner.

Next time you are thinking about a partner for your livestock business, think Elders. We know the market; we understand what clients need and what your clients will need too. We offer services tailored to the needs of primary producers and we also have a range of product solutions to support agribusiness.

Our aim is to help farmers like you make the most of their farming business by making more possible. That's why Elders is the right choice if you need expert help with the business of farming.

BELLES OF BANQUET

After achieving outstanding success at Sales and Shows for 24 Years we are dispersing the heart of the Banquet herd. We will be offering over 100 of our elite Banquet Stud females. 31% of the bulls in the record breaking 2015 Sale were produced by these females.

FAQ

► *What will be offered?*

All 2006 to 2009 (B,C,D & E) drop females that are free of all known genetic disorders and have the Banquet prefix. Six yearling “show prospect” heifers will also be offered.

► *Will the ET Donors be included?*

Yes, all donors from the B,C,D & E drops will be offered. Many of these donors will have young ET calves available for inspection. Embryos from these donors will not be sold.

► *I am a bull buying client of Banquet, will this Sale reduce my selection of Bulls in future years?*

No. Many daughters and embryo transplant progeny of these cows will remain in the herd. Therefore the genetics of these cows will continue to be available to Banquet clients. With our increased embryo transfer program and the number of maidens entering our herd we will continue to offer in excess of 200 bulls annually. 26% of the bulls in our 2015 Sale were produced by first calving heifers.

► *When and where will they be offered?*

**Thursday 26th November 2015 - 11am EDST
at 420 Fosters Lane, Mortlake Victoria.
Inspection from 3.00pm Wednesday
followed by a “Banquet” at Banquet.**

THE OPPORTUNITY OF OPPORTUNITIES

Select Banquet Female Sale

Thursday 26th November 2015

- ★ Banquet is dispersing its entire 2006 to 2009 drops of breeding cows
 - Nothing retained in these drops
- Over 100 outstanding breeding females including ET donors
