SALE INFORMATION

VENUE:

Our Spring Bull Sale will be held in the WVLX, Mortlake, Victoria.

INSPECTION:

We encourage buyers to inspect the bulls prior to sale day. It allows us to assist you select the sire best suited to your needs. Phone us on 0419 884 839 and advise us of your intending visit.

Lots catalogued are available for inspection from 9.00am, Friday 6th September.

FREE DELIVERY:

Banquet offers free delivery to the buyer's nearest town on route to Adelaide, SA and Emerald, QLD and to the property within Vic.

BULL TESTING:

All bulls have passed a comprehensive fertility test conducted by Dr. Libby Summerrell of Terang Mortlake Veterinary Clinic including –

examination for structural soundness
examination of reproductive organs
measurement of scrotal circumference
SEMEN MOTILITY tested
SEMEN MORPHOLOGY tested

Semen Motility

Sperm cells need to be motile. At about 60um long, they've a way to travel to get the job done. Following collection of a semen sample, a drop is placed on a microscope slide and examined, 'crush side', to assess the percentage of sperm cells moving forward.

Semen Morphology

Morphology is the anatomy or structure of the sperm. It cannot be tested 'crush side' requiring a large specialised laboratory microscope to examine a preserved semen sample, assessing the % normal and % abnormal sperm cells. It can pick up defects in the sperm that 'crush side' testing cannot. The most serious of these defects can see the sperm start to fertilise an egg but fail to result in a viable embryo and the female will fail to fall in calf.

Note that Semen Morphology can differ in subsequent samples from the same bull. Stress can cause this and putting a bull through a sale will generally cause some stress.

THE BANQUET BULL GUARANTEE:

All bulls are backed by a 3 YEAR GUARANTEE. In the event of a bull proven to be incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls' incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim.

It is important to understand that normal care must be taken and good husbandry practices observed, as we cannot replace a bull that is injured or dies for any reason. As such, we recommend you insure animals against injury. A representative of an insurance service organisation will be available on sale day.

ANIMAL HEALTH INFORMATION

NATIONAL CATTLE HEALTH STATEMENT:

Banquet has its own Biosecurity Plan prepared in conjunction with our local vet Dr. Craig Wood. See page 37 for our National Health Statement.

Banquet has a J BAS 8 Score.

STOCK HEALTH:

All bulls have been vaccinated with Pestiguard vaccine (pestivirus), Vibriovax (vibriosis), 7 in 1 Vaccine (leptospirosis) and drenched with Paramectin. Any bulls purchased for Queensland will be vaccinated against 3 day sickness and receive the 3 germ tick vaccine upon request.

RECESSIVE GENETIC CONDITIONS (see pages 32 and 33)

All bulls in this Sale are free of AM, NH, CA and DD by parentage, or have been tested free.

NO CARRIER BULLS ARE BEING OFFERED FOR SALE

REBATE TO OUTSIDE AGENTS:

Outside agents accompanying a purchaser to the sale are entitled to a 5% rebate.

Please refer to page 4 for further detail.

AFTER SALE SERVICE:

Banquet is renowned for excellence in providing after sales service.

If in doubt, speak with us or with any one of our many satisfied clients.

FURTHER INFORMATION:

Contact Stephen or Noleen Branson by phoning 0419 884 839 or 0437 029 992
or Email banquetangus@westvic.com.au

NEXT BULL SALE: THURSDAY 27th FEBRUARY 2020

100 BULLS

OUTSIDE AGENT COMMISSION REBATES

5% rebate will be paid to all agents that attend and who purchase with or on behalf of their clients and settle within seven days of sale date.

2% rebate will be paid to all agents introducing clients that purchase but not accompanied by them to the sale. A written introduction must be received by the vendor 48 hours prior to the sale and accounts must be settled within 7 days of the sale date.

SIGHT UNSEEN PURCHASING PROGRAM

100% satisfaction guarantee.

Available to buyers who cannot attend the Sale.

For those purchasers who have discussed their requirements with us prior to the Sale we offer a 100% money back guarantee if the purchaser is not completely satisfied with their purchase. We must be notified within seven days of taking delivery. However the purchaser will be responsible for return transport costs.

BANQUET FEATURE SIRES

BANQUET KANE K233

Witalocka X10
Sire: BANQUET DUNCAN D412
 Banquet Dream A250

Banquet Zappa Z236
Dam: BANQUET QUIET F567
 Banquet Quiet C359

Kane K233 is a mountain of beef on legs. A big, strong, thick and heavy boned sire. His temperament and that of his progeny has to be experienced to appreciate. His sire, Duncan D412, bred so many of these type of bulls. G275 to Toora West, G272 to Anvil, G306 to Sumatanga Park and J507 at Banquet. F567, dam of K233, is an outstanding female and we have included her in our Embryo Transfer program. Already she has produced a son selling for \$14,000 to Webb Pastoral. The influence of K233 at Banquet is certain to be long and positive.

BANQUET JAMBEROO J507

Witalocka X10
Sire: BANQUET DUNCAN D412
 Banquet Dream A250

Banquet Abode A005
Dam: FORRES WILCOOLA D107
 Lochton Y004

Jamberoo J507 has an exceptional phenotype. He has a powerful head, huge capacity and a long, thick and deep hindquarter. All this adds up to weight and lots of it. These Duncan sons and daughters have lots of weight and pass it to their progeny. A half brother to J507, H511, was also used at Banquet. Their grand sire, Abode A005, topped our Sale at \$20,000 to Forres Stud. At their Dispersal we repurchased him for \$22,000 in conjunction with Quarterway and Shingle Hut.

BANQUET FEATURE SIRES

ASCOT HALLMARK H147

Te Mania Berkley B1
Sire: TE MANIA EMPEROR E343
 Te Mania Lowan Z74

Millah Murrah Digby D108
Dam: MILLAH MURRAH BRENDA F123
 Millah Murrah Brenda D113

Hallmark may prove to be the greatest outcross bull we have introduced to Banquet in many years. He consistently breeds larger framed cattle with excellent structure, depth and softness. We offered two young sons in our 2019 Autumn Sale. One, National N278, topped the Sale to Toora West for \$48,000 and the other sold to Cleveland Pastoral for \$20,000. Many more outstanding prospects will come forward.

BANQUET JHETT J426

Banquet Collective C351
Sire: BANQUET FADDIST F238
 Banquet Lass C219

Hingaia 469 (NZ)
Dam: BANQUET DREAM G489
 Vermont Dream Y301

Jhett J426 is one of the most exciting young sires at Banquet. He is moderate framed with excellent muscularity. He is easy doing with exceptional structure. He gives us confidence that he could thrive with high work loads in any conditions. J426 supersedes his sire as our choice of sires descending from Right Time 24J. His dam, Dream G489, may be our most valuable donor at present. She has enormous capacity and her progeny are exceptional. Another son, L352, is also in use at Banquet. G489 is a daughter of Hingaia 469 and Vermont Dream Y301, the greatest cow to come from Vermont.

'P' DROP BULLS

Lot 21 leads a line of fourteen bulls that have been specially selected for joining maiden heifers.

They are selected on

Type – Long necks, fine shoulders and moderate bone.

Pedigree – They are sired by proven calving ease sires that have been used by Banquet.

Birth Weight – All these bulls are in the low to moderate actual birth weight range.

Age – At 16 to 18 months of age these bulls are naturally lighter and therefore more gentle on heifers.

EBV – EBV's of these lots are in the low to moderate range for birth weight EBV.

Remember – Management of the heifers has the greatest impact on calving difficulties.

 BANQUET QUIET D348[#]

Powerful, capacity and grunt. If you look at P081 or his pedigree these adjectives jump to mind. F369 is still in use at Banquet. He always adds thickness, butt shape and softness to his calves. M010, dam of P081, is from a long line of superior females. E442, A197, T59, P43, L88 and E14. All donor females have sons used at Banquet. E442 sold to Bannaby for \$10,000 and A197 to Anvil for \$38,000.

DISCLAIMER AND PRIVACY INFORMATION

IMPORTANT NOTICES FOR PURCHASERS

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder nor owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

PV: both parents have been verified by DNA

SV: the sire has been verified by DNA

DV: the dam has been verified by DNA

#: DNA verification has not yet been conducted

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:

Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

BRINGING A NEW BULL HOME

Buying a bull is an investment. This investment should contribute to the genetics and sale income of your herd for many years. If you are to get the most from your new bull, it pays to look after him well, especially in the first season of use. This report discusses management strategies to maximise the productive life of your bulls.

Arrival

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when purchased. Bulls can become upset and excited in the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of cows or steers. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water, then leave the bull alone until the next day, before giving routine health treatments.

Mating new bulls

Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as “expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining”. This expectation would apply to 2 year old bulls, but not to younger bulls.

During mating

Check bulls at least twice each week. Watch them work if possible and pay particular attention to any sign of abnormal serving problems like “corkscrew penis” or too many cows returning to heat.

Have a spare bull or bulls available to replace any that break down. If you have to replace a bull, get the bull checked by your vet. Sometimes prompt treatment for small problems can avoid culling. Vendors that provide guarantees on their bulls will usually require a veterinary certificate indicating the problem with unsatisfactory bulls.

Rotate bulls in single sire groups to make sure that any bull infertility is covered. Single sire joining works well but it has risks. The bulls must be checked regularly and carefully or the bulls rotated every one or two cycles.

RECESSIVE GENETIC CONDITIONS

INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

Key point: With today's DNA tools undesirable genetic conditions can be managed!

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

Key point: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

Key point: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Animal Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Key point: The genetic status of an animal is subject to change and will be re- analysed and adjusted each week as DNA test results of relatives are received.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia’s Breed Development and Innovation Manager at (02) 6773 4602.

Breakwater

Insurance Brokers

FARM INSURANCE

Protect your farm business and your assets with an insurance policy tailored to meet your needs.

Breakwater Insurance can arrange competitive premiums and cover for commercial dairy, beef, sheep and cropping enterprises.

We offer professional, on-farm advice relating to:

- Livestock mortality
- Farm buildings and contents
- Home and contents
- Farm machinery and machinery breakdowns
- Livestock, hay, fencing and farm trees
- Liability
- Motor vehicles (all types)
- Theft
- Business interruption.

NATIONAL CATTLE HEALTH DECLARATION

Version
18/10/17

Owner of cattle **S & N Branson**
(Full trading name)

Property/place where the journey commenced
(Address) **Mortlake** Vic **3272**
(Town/suburb) (State) (Postcode)

Property Identification Code (PIC) of this property
This MUST be the PIC of the property that the stock is being moved from

Details of other statutory documents relating to this movement e.g. NVD

(Document type) (Document number) / / (Expiry date)
(Office of issue)

Note: If NVD accompanying this declaration then you may go straight to question 1

Description of cattle		
Number	Description (Breed, sex e.g. Hereford Cross Steers)	Brands or Earmarks
46	Angus Bulls	
46	Total	

Consigned to **Various Buyers**
(Name of person or business)

(Address) (Town/suburb) (State) (Postcode)

Destination (if different) of cattle (Location address)

1. Has the owner stated above owned these cattle since birth?
Yes No

2. On the property stated above, has an on-farm biosecurity plan been implemented?
Yes No
If yes, which plan (e.g. Farm Biosecurity, LBN, BioCheck) **Farm Bio Security**

3a. Have these cattle been tested for the presence of pestivirus antigen?
If tested, were any cattle found to be persistently infected? Yes No
Yes No

3b. Have these cattle been tested for the presence of pestivirus antibody?
If tested what percentage of the tested cattle were antibody positive? Yes No

4. Enzootic Bovine Leucosis (EBL) test result for animals being moved:
Date of test / /

5. Are the cattle from an EBL accredited or certified free herd: Yes No

6. Are these cattle from a herd or property with an occurrence of Johne's disease (JD) in any susceptible species within the last five years?

Yes No Don't know J-BAS of (optional)

7. On the property stated above, have cattle been co-grazed with dairy cattle and/or sheep?
Yes No Don't know

8. Source herd has a negative JD test result: Check Test Sample Test
Date of test **26/06/18**

9. If dairy cattle, the consignment has a Dairy Assurance Score of:

Part A (herd base score) Part B (calf credits) Part C (total Dairy Score)

10. Treatments

Treatments	Product	Date of treatment within last 6 months
Drench	Dectomax	6/06/2019
Liver fluke treatment		
Other treatments (type)	Vibriovax, Pestiguard, 7 in 1	12/08/2019

11. Current vaccinations for the cattle being moved (see explanatory note)

Clostridial vaccination (e.g. 5 in 1): Yes Clostridial vaccination (Botulism): Yes

Pestivirus vaccination: Yes Bovine ephemeral fever vaccination: Yes

Leptospira vaccination: Yes Vibrio vaccination: Yes

JD (Sillirum) vaccination: Yes

Other vaccinations (specify):

12. Any other relevant health information

DECLARATION (see explanatory notes for further information)

I **Noeleen Elizabeth Branson**
(Full name) (Full address)

184 Steeles Lane **Mortlake** Vic **3272**
(Address continued) (Town/suburb) (State) (Postcode)

I declare that I am the owner or the person responsible for the husbandry of the cattle and that all the information in this document is true and correct. I also declare that I have read and understood all the questions that I have answered, that I have read and understood the explanatory notes, and that I have inspected the animals and deem them to be healthy, free of signs of disease and fit to travel.

Signature* **Noeleen Branson** Date **13/08/2019**

*Only the person whose name appears above may sign this declaration, or make amendments which must be initiated.
