## SALE INFORMATION

### VENUE:

Our Spring Bull Sale will be held in the WVLX, Saleyards Mortlake, Victoria.

### INSPECTIONS:

We encourage buyers to inspect the bulls prior to Sale Day.

Presale Inspection Days

Friday 28th August 10.00am to 2.00pm

Monday 31st August 10.00am to 2.00pm

At 184 Steeles Lane, Mortlake. By appointment only.

Please contact the Branson Family or Agents.

Sale Day inspection from 9.00am, Friday 4th September.

### FREE DELIVERY:

Banquet offers free delivery to the buyer's nearest town on route to Adelaide, SA and Emerald, QLD and to the property within Vic.

### BULL TESTING:

All bulls have passed a comprehensive fertility test conducted by Dr. Libby Summerrell and Dr. Craig Wood of Terang Mortlake Veterinary Clinic including –

examination for structural soundness  
examination of reproductive organs  
measurement of scrotal circumference  
SEMEN MOTILITY tested  
SEMEN MORPHOLOGY tested

### Semen Motility

Sperm cells need to be motile. At about 60um long, they've a way to travel to get the job done. Following collection of a semen sample, a drop is placed on a microscope slide and examined, 'crush side', to assess the percentage of sperm cells moving forward.

### Semen Morphology

Morphology is the anatomy or structure of the sperm. It cannot be tested 'crush side' requiring a large specialised laboratory microscope to examine a preserved semen sample, assessing the % normal and % abnormal sperm cells. It can pick up defects in the sperm that 'crush side' testing cannot. The most serious of these defects can see the sperm start to fertilise an egg but fail to result in a viable embryo and the female will fail to fall in calf.

Note that Semen Morphology can differ in subsequent samples from the same bull. Stress can cause this and putting a bull through a sale will generally cause some stress.

### COVID 19 RESTRICTIONS

At present we believe that by complying with all the current restrictions we will be able to conduct a physical Auction at the WVLX. If the situation deteriorates we may need to move to an Auctions Plus Sale only.

Follow our Website, Facebook or phone us for updates.

We recommend contactless inspections of the Sale Lots prior to the Sale. Please make an appointment.

If inspections are not possible remember our "sight unseen purchasing program". Refer to page 4.

Prospective purchasers must discuss their requirements with us prior to the Sale.

## ANIMAL HEALTH INFORMATION

### NATIONAL CATTLE HEALTH STATEMENT:

Banquet has its own Biosecurity Plan prepared in conjunction with our local vet Dr. Craig Wood. See page 33 for our National Health Statement.

Banquet has a J BAS 8 Score.

### STOCK HEALTH:

All bulls have been vaccinated with Pestiguard vaccine (pestivirus), Vibriovax (vibriosis), 7 in 1 Vaccine (leptospirosis) and drenched with Paramectin. Any bulls purchased for Queensland will be vaccinated against 3 day sickness and receive the 3 germ tick vaccine upon request.

### RECESSIVE GENETIC CONDITIONS (see pages 28 and 29)

All bulls in this Sale are free of AM, NH, CA and DD by parentage, or have been tested free.

NO CARRIER BULLS ARE BEING OFFERED FOR SALE

### AFTER SALE SERVICE:

Banquet is renowned for excellence in providing after sales service.

If in doubt, speak with us or with any one of our many satisfied clients.

### THE BANQUET BULL GUARANTEE:

All bulls are backed by a 3 YEAR GUARANTEE. In the event of a bull proven to be incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls' incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim.

It is important to understand that normal care must be taken and good husbandry practices observed, as we cannot replace a bull that is injured or dies for any reason. As such, we recommend you insure animals against injury. A representative of an insurance service organisation will be available on sale day.

### FURTHER INFORMATION:

Contact Stephen or Noleen Branson  
by phoning

0419 884 839 or 0437 029 992

or Email

banquetangus@westvic.com.au

# OUTSIDE AGENT COMMISSION REBATES

5% rebate will be paid to all agents that attend and who purchase with or on behalf of their clients and settle within seven days of sale date.

2% rebate will be paid to all agents introducing clients that purchase but not accompanied by them to the sale. A written introduction must be received by the vendor 48 hours prior to the sale and accounts must be settled within 7 days of the sale date.

## SIGHT UNSEEN PURCHASING PROGRAM

100% satisfaction guarantee.

Available to buyers who cannot attend the Sale.

For those purchasers who have discussed their requirements with us prior to the Sale we offer a 100% money back guarantee if the purchaser is not completely satisfied with their purchase. We must be notified within seven days of taking delivery. However the purchaser will be responsible for return transport costs.

## BANQUET FEATURE SIRES

### BANQUET LEIGH L010

Te Mania Emperor E343  
**Sire: ABERDEEN ESTATE HOMER H70**  
 Aberdeen Estate Dream F21

SAV 004 Density 4336 (USA)  
**Dam: BANQUET DREAM B189**  
 Banquet Dream V104

Leigh L010 created vigorous competition in our 2017 Sale before being knocked down to Charles and Cass Kimpton for \$30,000. He is the "Toora West" type, long head, long neck, long body and very sound. Like so many of our sires at Banquet he is strongly influenced by the Dream family. His sire, Homer, is a son of Aberdeen Estate Dream F21 who was sold for the then record of \$48,000. Her half sisters have sold for \$45,000 and \$38,000. Dam of L010, Dream B189, was an outstanding daughter of V104. Four sons of V104 were used at Banquet, eleven sons sold to average \$12,300 and two daughters sold to Studs at \$27,000 and \$13,000. The first two sons of L010 were offered in this years Autumn Sale and sold for \$18,000 and \$16,000.

### BEN NEVIS METAMORPHIC M51

Te Mania Bartel B219  
**Sire: AYRVALE BARTEL E7**  
 Eaglehawk Jedda B32

Ben Nevis Eritrea E6  
**Dam: BEN NEVIS JEAN K80**  
 Ben Nevis Jean H215

Metamorphic M51 was purchased for \$32,000 in conjunction with Fernleigh Stud and Merchiston, Atahua and Twin Oaks in New Zealand. His first sons were offered in this years Autumn Sale. They met with strong demand, selling to \$20,000 and averaged almost \$13,000. We reserved three very good sons for this Sale. Metamorphic's dam, K80, and her dam, H215, are the top donors at Ben Nevis. They are exceptional in their soundness. They have long, deep and thick bodies. They have excellent udders and above all consistently produce top calves. If our "Meta" daughters carry the traits of these top breeders we will be ecstatic.

## BANQUET FEATURE SIRES

### BANQUET JHETT J426

Banquet Collective C351  
**Sire: BANQUET FADDIST F238**  
 Banquet Lass C219

Hingaia 469  
**Dam: BANQUET DREAM G489**  
 Vermont Dream Y301

Sons of Jhett J426 feature strongly in the calving ease bulls in this catalogue.

J426 is one of the most exciting sires at Banquet. He is moderate framed with excellent muscularity. He is easy doing with exceptional structure. He gives us confidence that he could thrive with high work loads in any conditions. J426 supersedes his sire as our choice of sires descending from Right Time 24J. His dam, Dream G489, may be our most valuable donor at present. She has enormous capacity and her progeny are exceptional. G489 is a daughter of Hingaia 469 and Vermont Dream Y301, the greatest cow to come from Vermont. Two other sons have been retained at Banquet. Liberty L352 and Powerhouse P288.

TACE	DIR	DTRS	GL	Bwt	200	400	600	Mwt	Milk	SS	DC	Cwt	EMA	Rib	Rump	RBY%	IMF%

### BANQUET KATOOMBA K312

WK Replay (USA)  
**Sire: ANVIL FUSION F275**  
 Te Mania Y147

Banquet Time Frame Y135  
**Dam: BANQUET DREAM D332**  
 Banquet Dream B239

Katoomba K312 topped our 2016 Autumn Sale when he was selected by Paul Hawkins and Merchiston Stud (NZ) for \$21,000. Katoomba sons featured in our 2018 Spring Sale selling to \$14,000, \$13,000 and \$10,000. A top son leads off the young bulls in this catalogue, Lot 17. We used, N063, over maidens. There are several of the resulting bulls in this catalogue.

TACE	DIR	DTRS	GL	Bwt	200	400	600	Mwt	Milk	SS	DC	Cwt	EMA	Rib	Rump	RBY%	IMF%

KO A241 EQUATOR F77<sup>PV</sup>  
 VONK316 BANQUET WIVEM K316<sup>#</sup>  
 BANQUET WIVEM E436<sup>#</sup>

The strength of head, length of body, depth and thickness of P504 has earned him the right to Lot 1 in this Sale. His sire, K346, has sired 92 calves at Banquet. His sons have sold to \$19,000 and \$16,000 twice. The pedigree of P504 carries some of the best female lines at Banquet, Champagne C154, Dream Y301 and Dream V109.

P510 will be one of the last sons of Homer H70. His Paternal Brothers L010 (\$30,000) and N099 (\$32,000) are both in use at Banquet. Homer added length and extra cover to his progeny, just what we see in P510. A half to P510 sold for \$11,000 in 2018. Their dam, G202, carries a double cross of Time Frame Y135 who created a new Australian record in 2005 when he sold to Anvil Stud for \$50,000.

Again exceptional muscularity in this "Meta" son. Meta adds this extra dimension of muscle without compromising structural correctness or mobility. That is what makes these sire prospects so valuable to your program. The other important ingredient in the package that is P343, is the depth of breeding in his Dam line.

The sons of the N.Z outcross sire Merchiston Stoker, featured in our 2018 Autumn Sale. We present two excellent ET sons for your competition. Stoker bred exceptionally well at Merchiston and Atahua in NZ. His sons at Banquet were keenly sought after and we are receiving very positive reviews on their performance. P399 shows great depth of body and thickness with excellent cover. Lot 12 is his flush brother and read about their exceptional Dam line in his notes.

# RECOMMENDED FOR JOINING MAIDEN HEIFERS

The following eighteen Lots have been selected on

Type – long necks, fine shouldered and moderate bone.

Pedigree – They are sired by proven calving ease sires that have been used by Banquet.

Birth Weight – All these bulls are in the low to moderate actual birth weight range.

Age – At 16 to 18 months of age these bulls are naturally lighter and therefore more gentle on heifers.

EBV – EBV's of these lots are in the low to moderate range for birth weight EBV.

Remember – Management of the heifers has the greatest impact on calving difficulties.

## DISCLAIMER AND PRIVACY INFORMATION

### IMPORTANT NOTICES FOR PURCHASERS

**ATTENTION BUYER:** Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

#### Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

*PV: both parents have been verified by DNA*

*SV: the sire has been verified by DNA*

*DV: the dam has been verified by DNA*

*#: DNA verification has not yet been conducted*

*E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.*

#### Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

#### BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

*I, the buyer of animals with the following ids.....  
.....  
from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.*

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)

# BRINGING A NEW BULL HOME

Buying a bull is an investment. This investment should contribute to the genetics and sale income of your herd for many years. If you are to get the most from your new bull, it pays to look after him well, especially in the first season of use. This report discusses management strategies to maximise the productive life of your bulls.

#### Arrival

New bull buyers are often concerned about the apparent bad temperament of a bull that seemed quiet enough when purchased. Bulls can become upset and excited in the sale and delivery process. They are subjected to strange yards, different noises, loss of their mates, different people, different handling methods, trucking, unloading, new paddocks and different water and feed. This can upset animals which are normally very quiet.

When the bull arrives home, unload him at the yards into a group of cows or steers. Never jump the bull from the back of a truck into a paddock. Bulls from different origins should be put into separate yards with other cattle, steers or cows, for company.

Provide hay and water, then leave the bull alone until the next day, before giving routine health treatments.

#### Mating new bulls

Newly purchased young bulls should not be multiple joined with older herd bulls. They will not be allowed to work much and in keeping them away from the cows, the older, dominant bull will knock them around.

Use new bulls in either single sire groups or with other young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

The Australian Association of Cattle Veterinarians (AACV) defines a normal, fertile bull as "expected to get 90% of 50 normal, cycling, disease free females pregnant within 9 weeks, and 60% of these should become pregnant in the first three weeks of joining". This expectation would apply to 2 year old bulls, but not to younger bulls.

#### During mating

Check bulls at least twice each week. Watch them work if possible and pay particular attention to any sign of abnormal serving problems like "corkscrew penis" or too many cows returning to heat.

Have a spare bull or bulls available to replace any that break down. If you have to replace a bull, get the bull checked by your vet. Sometimes prompt treatment for small problems can avoid culling. Vendors that provide guarantees on their bulls will usually require a veterinary certificate indicating the problem with unsatisfactory bulls.

Rotate bulls in single sire groups to make sure that any bull infertility is covered. Single sire joining works well but it has risks. The bulls must be checked regularly and carefully or the bulls rotated every one or two cycles.

# RECESSIVE GENETIC CONDITIONS

## INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

### Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

**Key point: With today’s DNA tools undesirable genetic conditions can be managed!**

### What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

**Key point: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.**

### How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as “carriers”.

### What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

**Key point: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.**

### How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Animal Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

**Key point: The genetic status of an animal is subject to change and will be re- analysed and adjusted each week as DNA test results of relatives are received.**

### Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia’s Breed Development and Innovation Manager at (02) 6773 4602.
